

## My Plan

The biggest takeaway is the fact that the internet stores and keeps an archive of your information. The digital footprint that left of an individual can be either positive or negative. It is therefore important that this concept of professional posting and guarded posts be inculcated into our students. I conducted my search and found several pieces of information about myself. Most of them being from my earlier years. It's a blessing that none are negative, however that fact that they are still there proves that in a digital society there is a tab on each of us. I use Google for my basic searches and for communications I use Gmail, Yahoo! And whatsapp.
